

List of the California Academy of Sciences [slide-mounted] Collembola holdings.

This list was generated based on the determinations noted on the slides, most of which are several decades old, and undoubtedly many are in error. No attempt is made to correct identifications, but instead the names have been merely organized on the latest classification available at www.collembola.org. The collection is estimated at 2,000 - 3,000 slides, the great majority of which are from California. Included in these numbers are 3 boxes (~50 slides each) of slides with multiple determined species on the same slide, and another 4 boxes of undetermined material.
